MONTHLY WEATHER MAP

November 1958

LIBRARY
JAN 23 1959

General Summary of Weather Conditions

November temperatures averaged above seasonal values in Ontario, in southern Quebec and southern Manitoba, and below seasonal values in British Columbia, the Northwest Territories and northern Quebec.

Precipitation was above normal in the Atlantic Provinces, below normal in Quebec and above normal in most of Ontario. Southern parts of the Prairie Provinces and British Columbia had surpluses, but there were deficiencies further north. There were surpluses also in the District of Mackenzie, and in the southern part of Baffin Island, but elsewhere, precipitation in the Northwest Territories totalled below the usual amount.

The notable feature of the month was the transition from warm to cold. November began with warm temperatures, reaching to the sixties, in most southern regions; but the cold that gripped Edmonton on the 15th held the whole interior of the country by the end of the month. The arrival of the cold air was preceded by falls of six to ten inches of snow across most of the country.

Temperatures were seasonal in most of Newfoundland and Labrador in November, although St. Andrews and Torbay reported temperatures about two degrees below the usual November values. Precipitation was very slightly deficient at Torbay, but there were surpluses of thirty to fifty per cent elsewhere throughout the province. Rainfall amounts were near or below normal, and the surpluses were generally in the form of snow. Excesses were great in the southwestern tip of the Island; St. Andrews reported 9.38 inches of rain and 14.2 inches of snow, a total of 10.8 inches of precipitation, more than twice the usual November total. The month was generally stormy, with a number of major disturbances passing through or near the Province; Gander reported the windiest November in 20 years of record, with a gust of 73 m.p.h. on the 28th.

Temperatures in the Maritimes averaged about a degree below the usual November values, although there were a few small excesses in Nova Scotia, and deficiencies of two degrees in Prince Edward Island. Temperatures fluctuated wildly through the month as a number of storms passed through the region, with warm spells succeeded by surges of cold air.

Precipitation amounts in the Maritimes showed a great variability from place to place. There were deficiencies averaging twenty to thirty per cent in northwestern New Brunswick, but elsewhere precipitation was above the normal values. Excesses ranged from about forty per cent near Saint John to fifteen per cent near Moncton and to about twenty-five per cent on Prince Edward Island. Nova Scotia had larger amounts, ranging from six inches to over nine - excesses of twenty to ninety per cent. Snowfall amounts were generally well above normal, and twice normal in many places.

It was a windy month in the Maritimes. Halifax reported the windiest November in 43 years of record, an average wind speed of 17.3 m.p.h. Strangely enough, November 1958 was one of the sunniest Novembers on record in the Atlantic Provinces.

Temperatures over southern Quebec were everywhere above the usual November values. Excesses were about one or two degrees in areas east of Quebec City, but increased westward to four degrees at Amos and Lake Temiskaming. Temperatures were well above normal in the first three weeks of the month, but the sudden influx of cold Arctic air on the 26th dropped temperatures sharply, and for the last four days of the month the temperature failed to rise above the freezing point. North of the 50th parallel, November was a dreary month, with temperatures averaging generally about three degrees below the usual values.

Precipitation was deficient almost everywhere in Quebec in November. A few stations near St. Agathe, several in Gaspe, and those along the valley of the Saguenay reported small excesses; Nitchequon had precipitation seventeen per cent above normal; there were excesses also from the extreme northeast of the province - only twenty per cent at Fort Chimo, but a hundred per cent at Cape Hopes Advance, and nearly two hundred per cent at Indian House Lake; but everywhere else deficiencies averaged about twenty to forty per cent. Seven or eight-inch snowfalls ahead of the cold wave in the last few days of the month brought the total falls generally above the November average, but failed to make up the deficiencies resulting from the warm dry weather earlier in the month.

November 1958 was a relatively warm month throughout Ontario. Excesses increased northward from about a degree along Lake Erie to three degrees over most of southern Ontario and to four degrees over northern Ontario, with Timmins and Cochrane reporting temperatures five degrees above the November normal. At Toronto, temperatures did not drop below the freezing point until the night of the 22nd, the latest date on record there. Temperatures were everywhere far above normal values, until the sudden cold wave in the last week dropped temperatures sharply. New low temperature records for the month were established at several places; on the 30th North Bay reported eleven degrees below zero and Windsor four degrees above zero, both new records for these stations for the month of November.

Precipitation in Ontario in November was generally deficient in eastern and central parts of the province, but excessive in the southwest, north and northwest. In eastern Ontario, deficiencies averaged about twenty-five per cent, and precipitation was only about two-thirds normal in the vicinity of North Bay. Near Toronto excesses were small, but increased westward to about thirty or forty per cent in most areas, and stations near the eastern shores of Lake Huron reported surpluses of fifty to sixty per cent. Rainfall was generally only a little above normal in most areas, but the six to eight-inch snowfall of the last week brought snowfalls to above normal values. Excesses in north-central Ontario generally averaged about thirty or forty per cent, but further west, excesses were larger, exceeding a hundred per cent at several stations. Fort William reported 3.37 inches of rain and 16.9 inches of snow - the wettest November since 1940 and the second wettest since 1883.

As in most of Eastern Canada, in Ontario totals both for hours of sunshine and wind speed were above the usual November values.

November of 1958 was a remarkable month in the Prairie Provinces; there was a sharp temperature change during the month, and there were well marked areas of precipitation surplus and deficiency. Temperatures in Manitoba averaged about a degree above the usual November values, although in the northern interior, in a belt northwest from Gillam, there were deficiencies of about three degrees. Saskatchewan as a whole averaged about a degree below normal, with deficiencies of two or three degrees in central parts of the province. In Alberta, an area around Edmonton had seasonable temperatures, but in the province as a whole, temperatures averaged a degree or two below usual November values. A Chinook in southern Alberta in the last few days of the month brough some relief from the cold.

Precipitation was above normal in Manitoba in November, except for a small area east of Lake Winnipeg. In the north, surpluses were thirty or forty per cent, but in the south, precipitation amounts two or three times normal were the general rule. Winnipeg reported precipitation two and a half times normal; 30.4 inches of snow, the second greatest November fall in 85 years.

In Saskatchewan and Alberta, precipitation was generally excessive to the south and deficient to the north. South of the Qu'Appelle River, surpluses were generally about thirty to sixty per cent; to the north of the river, falls were about normal. Calgary reported a slight deficiency, but in general the valleys and basins of the Oldman, Bow, Red Deer, Milk, Missouri and South Saskatchewan Rivers were areas of excessive precipitation. Falls were greatest to the south of the South Saskatchewan and Bow Rivers, with surpluses ranging from a hundred to two hundred per cent. North of the Battle River and the Saskatchewan Rivers, falls were, on the average, about half the usual November amounts.

Except in the north, November temperatures were below normal throughout British Columbia; as in the Prairies, Ontario and Quebec, most of the deficiencies were accumulated in the latter part of the month. Deficiencies in British Columbia averaged two to three degrees along the coast and in the southwest; but in the centre, particularly along the upper Fraser River, temperatures were generally about five degrees below the usual November values.

Precipitation in British Columbia in November was above normal in the south and below normal in the centre and north. Surpluses were particularly large in the southeast, ranging from forty to a hundred per cent along the Columbia River, and from fifty to a hundred and fifty per cent in the Okanagan Valley. In the southwest, surpluses were almost as great; Vancouver Airport reported 6.77 inches, a surplus of 1.36 inches, and Victoria 7.24 inches, more than 3 inches above the usual November fall. Northward, deficiencies were general, about fifteen per cent along the coast, sixty per cent in the region of the Bulkley River, forty to seventy per cent along the Upper Fraser, and thirty per cent around Fort St. John. Only in the extreme northeast corner was precipitation above normal, Fort Nelson reporting an excess of twenty-two per cent, sharing the general excess along the Mackenzie Valley.

Temperatures in the Yukon in November were about a degree below normal in the southwest, but in a belt from Whitehorse northward to Aklavik, there were excesses of about three degrees. Precipitation averaged generally about an inch, a little below normal, although Dawson reported only about a quarter-inch, a seventy-seven per cent deficiency.

Temperatures in the Northwest Territories were, with a few noteworthy exceptions, well below the usual values for November. There were excesses of four or five degrees to the south of Great Slave Lake, five degrees at Aklavik, and two degrees along the west coast of Hudson Bay. Everywhere else, November of 1958 was a markedly cold month. Deficiencies in Mackenzie and Keewatin averaged about three degrees, but in Franklin, deficiencies increased eastward. Cambridge Bay reported seven degrees below normal; Resolute reported a mean temperature of twenty degrees below zero, a deficiency of eleven degrees; but the greatest anomaly was at Clyde, a mean of nine degrees below zero, thirteen degrees below normal.

Precipitation in the Northwest Territories showed considerable divergences from the usual November values. In a large area comprising most of Mackenzie and northwest Keewatin, there were excesses varying from twenty to eighty per cent, and exceeding a hundred per cent only at Norman Wells. Around the fringe of this area, at Fort Smith, Fort Providence, Coppermine, Cambridge Bay and Aklavik, there were small deficiencies averaging about thirty per cent. In almost all of Franklin, precipitation was deficient about forty per cent, and Resolute and Clyde reported less than one-tenth of their normal November precipitation. On the other hand, the area of excessive precipitation that covered Newfoundland and Labrador extended northward to the southeastern part of Baffin Island; Frobisher Bay had a little over 30 inches of snow, about twice the usual amount.

NOVEMBER 1958
TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
